## Equivalent 1976 and 1971 Enumeration Areas

### Introduction

This document lists geographically equivalent 1971 and 1976 enumeration areas by federal electoral district and by province.

Since both the 1976 and the 1971 Censuses used the 1966 Representation Order for federal electoral districts (FEDs), the direct comparison of 1971 and 1976 census data at the FED level is possible. Unlike the federal electoral districts, the distribution of enumeration areas is different for the two censuses. Therefore, a listing of geographically equivalent 1971 and 1976 EAs was compiled to allow the comparison of census data at the EA level.

The boundaries and codes of EAs change from census to census, reflecting population shift and changes of electoral, municipal and statistical boundaries. As a result, a 1976 EA with the same boundaries as a 1971 EA may have a different EA code. Further, most 1976 EAs do not correspond to any 1971 EAs in terms of boundaries and area covered. In some cases, 1971 EAs, were split to create two or more 1976 EAs or several 1971 EAs were combined to create one 1976 EA. Sometimes, the geographic relationship between 1971 and 1976 EAs is still more complex, so that several 1971 EAs must be grouped together to form an area that can be composed of unpartitioned 1976 EAs.

## Secteurs de dénombrement équivalents de 1976 et de 1971

### Introduction

Le présent document indique les secteurs de dénombrement équivalents de 1971 et de 1976 selon la circonscription électorale fédérale et la province.

Comme les recensements de 1976 et de 1971 étaient tous deux fondés sur l'Ordonnance de représentation de 1966 relative aux circonscriptions électorales fédérales (CEF), il est possible de comparer directement les données tirées des recensements de 1971 et de 1976 au niveau des CEF. Contrairement aux circonscriptions électorales fédérales, la répartition des secteurs de dénombrement est différente dans le cas des deux recensements. Ainsi, on a dressé la liste des SD équivalents de 1971 et de 1976 afin de permettre la comparaison à ce niveau des données tirées des recensements.

Les limites et les codes des SD varient d'un recensement à l'autre, ce qui traduit les déplacements de population et la modification des limites électorales, municipales et statistiques. En conséquence, un SD de 1976 qui est délimité de la même façon qu'un SD de 1971 peut comporter un code de SD différent. De plus, la plupart des SD de 1976 ne correspondent à aucun SD de 1971 en ce qui a trait aux limites et à la superficie. Dans certains cas, des SD de 1971 ont été fractionnés pour former deux SD de 1976 ou plus, ou plusieurs SD de 1971 ont été réunis pour former un SD de 1976. Parfois, le lien géographique entre les SD de 1971 et de 1976 est encore plus complexe de sorte que plusieurs SD de 1971 doivent être groupés pour former un secteur composé de SD de 1976 non divisés.

Examples of the types of relationships that may exist between 1971 and 1976 EAs and the number of their occurrences are summarized as follows:

Relationship	No. of occurrences
One 1976 EA = one 1971 EA	10,280
One 1976 EA = two or more 1971 EAs	1,350
Two or more 1976 EAs = one 1971 EA	921
Several 1976 EAs = several 1971 EAs	4,673
Total number of equivalent sets of 1976 and 1971 EAs:	<u>17,224</u>

It should be noted that all groups of EAs are the minimal size necessary to form an equivalent geographic area from 1971 and 1976 EAs. Also, a few equivalent sets of 1971 and 1976 EA groups were very complex. (E.g., 60 1976 EAs and 80 1971 EAs were needed to form an equivalent geographic area in FED 35076.)

Since the EA is normally the smallest geographic unit for which census data are available, this document will allow the user to compare 1971 and 1976 Census data at the smallest possible detail.

Exemples et occurrences des genres de liens qui peuvent exister entre des SD de 1971 et de 1976:

Lien	Occurrences
Un SD de 1976 = un SD de 1971	10,280
Un SD de 1976 = deux SD de 1971 ou plus	1,350
Deux SD de 1976 ou plus = un SD de 1971	921
Plusieurs SD de 1976 = plusieurs SD de 1971	4,673
Nombre total d'ensembles équivalents de SD de 1976 et de 1971:	<u>17,224</u>

Il convient de remarquer que l'ensemble des groupes de SD sont de la taille minimale nécessaire pour former une région géographique équivalente à partir des SD de 1971 et de 1976. De plus, quelques ensembles équivalents de SD de 1971 et de 1976 étaient très complexes. (Par ex., il fallait 60 SD de 1976 et 80 SD de 1971 pour constituer une région géographique équivalente dans la CEF 35076.)

Comme le SD représente normalement la plus petite unité géographique pour laquelle on dispose de données du recensement, le présent document permettra à l'utilisateur de comparer les résultats les plus détaillés des recensements de 1971 et de 1976.

For users who require more detailed information, a computer tape of the 1971 and 1976 equivalent EAs with EA population counts and the 1971 and 1976 codes of other geostatistical areas (e.g., census division, census tract, etc.) is available.

This computer tape may be obtained from:

Census Information Services,  
Statistics Canada,  
Ottawa, Ontario.  
K1A 0T6

Les utilisateurs qui désirent plus de renseignements peuvent se procurer une bande d'ordinateur sur laquelle figurent les SD équivalents de 1971 et de 1976, y compris les chiffres de population des SD et les codes de 1971 et de 1976 d'autres régions géostatistiques (par ex., division de recensement, secteur de recensement, etc.).

### Definitions

Provinces and Territories are the major political divisions of Canada. From a statistical point of view, they are the basic units for which data are tabulated and cross-classified. The provinces are divided into federal electoral districts (one of several geostatistical units a province may be divided into). The Yukon and the Northwest Territories each constitute one FED. Each province is identified by a two-digit code as follows:

- 10 - Newfoundland
- 11 - Prince Edward Island
- 12 - Nova Scotia
- 13 - New Brunswick
- 24 - Quebec
- 35 - Ontario
- 46 - Manitoba
- 47 - Saskatchewan
- 48 - Alberta
- 59 - British Columbia
- 60 - Yukon
- 61 - Northwest Territories

A federal electoral district (FED) is any territorial unit entitled to return a member to serve in the House of Commons. The boundaries of these units need to conform to provincial boundaries only. These districts are subdivided into enumeration areas for the purpose of collect-

### Définitions

Les provinces et territoires constituent les principales divisions politiques du Canada. Du point de vue statistique, elles représentent les unités de base qui font l'objet de totalisations et de classements recoupés. Les provinces sont divisées en circonscriptions électorales fédérales (une des nombreuses unités géostatistiques pouvant diviser une province). Le Yukon et les Territoires du Nord-Ouest constituent chacun une CEF. On attribue à chaque province un code à deux chiffres, comme il est indiqué ci-après:

- 10 - Terre-Neuve
- 11 - Île-du-Prince-Édouard
- 12 - Nouvelle-Écosse
- 13 - Nouveau-Brunswick
- 24 - Québec
- 35 - Ontario
- 46 - Manitoba
- 47 - Saskatchewan
- 48 - Alberta
- 59 - Colombie-Britannique
- 60 - Yukon
- 61 - Territoires du Nord-Ouest

La circonscription électorale fédérale (CEF) est une unité territoriale élisant un député à la Chambre des communes. Les limites de ces unités ne doivent respecter que les limites provinciales. Aux fins de la collecte des données du recensement, les circonscriptions sont divisées en secteurs de dénom-

ing census data. Federal electoral district boundaries are changed by Parliament after each decennial census, reflecting shifts of population in the country. Both the 1971 and the 1976 Censuses used the FED boundaries based on the 1966 Representation Order.

Each FED is identified by a five-digit code. The first two digits are a provincial code, while the last three digits identify the FED within the province (e.g., 35001 - Algoma, Ontario). In 1971, the FEDs were identified by a three-digit code, rather than a five-digit code (e.g., 501 - Algoma, Ontario). Only the second digit of the provincial code and the last two digits of the FED code were used.

An enumeration area (EA) is the spatial unit canvassed by one Census Representative during the census data collection phase. It is defined according to the following criteria:

- (1) an EA may include as many as 375 households, depending on its location;
- (2) an EA always includes fewer than 100 farms;
- (3) an EA, being the building-block of all other geostatistical areas, never cuts across any area recognized by census.

Moreover, EA boundaries follow geographic features easily located on the ground, such as streets, railways, riverbanks and lakeshores. EAs are usually the smallest geographic units for which census data are available.

brement. Tous les 10 ans, le Parlement modifie les limites des circonscriptions électorales fédérales pour tenir compte des mouvements de la population au pays. On s'est servi, lors des recensements de 1971 et de 1976, des limites des CEF fondées sur l'Ordonnance de représentation de 1966.

Chaque CEF est représentée par un code à cinq chiffres. Les deux premiers indiquent la province et les trois derniers, la CEF à l'intérieur de la province (par ex., 35001 - Algoma, Ontario). En 1971, les CEF étaient représentées par un code à trois chiffres au lieu d'un code à cinq chiffres (par ex., 501 - Algoma, Ontario). Seuls servaient le second chiffre du code de province et les deux derniers chiffres du code de CEF.

Un secteur de dénombrement (SD) est une unité géographique recensée par un représentant du recensement lors de la collecte des données du recensement, qui répond aux critères suivants:

- (1) un SD peut comprendre jusqu'à 375 ménages, selon son emplacement;
- (2) un SD comprend toujours moins de 100 exploitations agricoles ou fermes;
- (3) étant l'unité de base de toutes les unités géostatistiques, un SD ne déborde jamais un secteur reconnu par le recensement.

En outre, les limites des SD correspondent à des repères géographiques naturels facilement reconnaissables sur le terrain, comme des rues, voies ferrées, rivières et lacs. En règle générale, les SD constituent les plus petites unités géographiques pour lesquelles on publie des données de recensement.

An EA is identified by a three-digit number that is unique within each federal electoral district.

Enumeration areas change from census to census due to population shift and changes of electoral, municipal and statistical boundaries. For this reason, the numbering of EAs changes from census to census. In the 1971 Census, Canada was divided into 42,533 enumeration areas. For the 1976 Census, Canada was divided into 35,154 EAs. Fewer enumeration areas were required for the 1976 Census, since the number of households per EA was increased from the 300 households per EA in the 1971 Census to 375 households per EA in the 1976 Census.

Un SD est représenté par un numéro à trois chiffres propre à chaque circonscription électorale fédérale.

Les secteurs de dénombrement varient d'un recensement à l'autre en raison des déplacements de population et de la modification des limites électorales, municipales et statistiques. Pour cette raison, le numéro de SD varie également d'un recensement à l'autre. Dans le recensement de 1971, le Canada était divisé en 42,533 secteurs de dénombrement tandis qu'en 1976, le pays en comptait 35,154. Le recensement de 1976 a exigé moins de secteurs de dénombrement qu'en 1971 puisque le nombre de ménages par SD a été augmenté de 300 ménages à 375 par SD entre les deux recensements.
